

The Antidote

This interview you're about to watch has huge implications. Over the past couple of years, there's been a lot of information regarding the coronavirus regarding COVID-19 confusing billions all around the world. Today, we're not just bringing theories or opinions. Today we have the privilege of bringing the facts to the table verifiable proof and evidence. Absolutely explosive material that will change the way that you see the world forever. That will change the way that you not only see our own history, but how we move forward will change for the better.

Today I have the privilege of sitting down with Doctor Bryan Ardis, a man who TLS has been following for the past year or so and a Man that deserves to be heard by the world. This interview is happening not only because I felt compelled to bring this information to the surface, but because TLS asked to make sure that I made this happen to make sure that people become aware. Of not just the origins of the coronavirus. But the antidote as well. I present to you The Antidote with Doctor Bryan Aris.

We have been lied to.

A sinister agenda is at play.

Millions of people have died. Billions have been brainwashed. It's time to wake up. The truth is finally here.

Doctor Brian Artis graciously agreed to fly across the country from Texas for an interview in my family's Wellness centre in Port Washington, New York, called Arys of light. A wellness centre known for having the Energy Enhancement System technology in it. This technology is responsible for helping millions of people all around the world, which is why I felt this was a perfect place to host such a powerful interview.

Please be sure to watch the entirety of this interview as Dr. Bryan Ardis share some very important message and instructions at the end of the interview. Thank you.

The information in this interview is not intended or implied to be a substitute for professional medical advice, diagnosis or treatment. All content, including tax graphics images and information, contained on or available through this website is for general information purpose only. you are encouraged to confirm any information obtained from this interview on your own with other sources, and review all information regarding any medical condition or treatment with your physician. Never disregard professional medical advice or delay seeking medical treatment because of something you have heard throughout this interview.

Dr. Bryan Ardis, i want to say thank you for your time and everything you been doing. thank you, Jason, good to be here. So, we have lots to talk about it, today.

before we dive into things, i want to acknowledge few things. starting with the date of what today is, today is September 11th, 2023,

22 years ago, this country the world really changed forever, 22 years ago really showed us how government able to print narrative, how many people believe that narrative.

And now a lot of people are starting to wake up to that. Today, in my eyes is symbolic, because we're able to do that same thing, only break those narratives. In this case with the coronavirus, something that you've been diving deep into in a very unique way, changing the narrative, showing people that it's not what we think. Only you're not just saying your thoughts and your opinions you're bringing. Evidence you're bringing proof and you're saying don't trust me and don't believe me. Let me show you what's actually going on here. So. Where do you want to begin with this, I mean? How did all of this start?

I really wondered what you were going to say when you brought up September 11th. I was like, Oh my God, what? Does he think about September 11th? What's he going to say? The perspective that it is September 11th is huge. Because for many people who are willing to look, you will realize the grand illusion that was cast by the media for the entire world to convince us of some narrative they wanted us to accept. When in fact it's not reality. So for me. The coronavirus pandemic, I cannot even believe I'm sitting here four years into this pandemic. Realizing the great illusions that were projected by the media and by our medical professionals, and by scientists around the world, medical journals around the world, that this was a bat virus being spread from a cave out of Wuhan and from the very beginning, the first month of the pandemic declared January of 2020. DNA experts said this is not a bad virus. The origin of this virus isn't even bats. It's actually two snakes. Imagine my shock to learn that 2 1/2 years into the pandemic.

And then wondering where did it all go wrong and how did everybody come to accept this reality, this new reality? How did that happen? How did we go from DNA experts confirming the genetic makeup of what was causing people to be

sick or actually venom proteins from 2 snakes? The King Cobra and the Asian crate snake that I had never heard of, and that really took me down this incredible journey. Realizing that we had all been lied to. The entire medical profession, the entire health agencies around the world, World Health organizations, have all been lying to the entire globe once again, like they did 20 years ago, the September 11th awful scenario.

I want to give people a grand summary and a structure of what we're going to be diving into, because I know you go very deep with a lot of the information that you bring in. Some people may be hearing this for the first time. And I do want to acknowledge what's in front of me over here, because what's in front of me makes this interview unique. I don't know what you know about the TLS that bring it to you and everybody watching it as well.

But the reason why I'm sitting here today is not just because of my interest with my families interested the work that you do and the incredible that you do.

Because I was asked to make this happen, I was asked by organization that I work with you've interviewed me about them maybe one or two Times in the past. the organization is know TLS golden light system, they are incredible in terms of what they do. for anybody who doesn't know what that is, just like there are dark organizations and darkened individuals in the world things to hurt people, but exactly opposite exists as well.

so, these few papers in front of me work, given to me by then, they gave me a few questions, they gave me a few pointers and they said we want to make sure that you bring Doctor Ardis information to the masses, even more so than it already is it.

they gave me pointers showed me what to do, they trusted me with the rest. so you've been being watched from the past year or so, they love your work, and they sent me to help get you working more out there, that makes this very unique because that doesn't happen every day, the last time,

the only time this happened with Doctor Sandra Rose Michael with energy enhancement system that were sitting next to right now, and ever since in 15

months we've done the impossible we've opened 340 centres in 40 countries, so that was inspired by them this is inspired by them,

I'm going to be following this along the way to the best of my ability to bring out what their intention is, which is making sure that your information and the proof and evidence that you bring to the surface, is known by absolutely everybody to the best of your ability, so we're going to be touching up on the truth about the origins of COVID-19, the dark truth behind the vaccine itself, I don't even know if you want to call it a vaccine, the timeline before and after the vaccine beginning from January of 2020, and most importantly which is the name of this interview The Antidote.

so it's about what's the problem, and what is the solution because I know you're working most to bring to the table right now, specially with this so-called new pandemic that they're bringing up, conveniently right before elections, I don't think it's a coincidence, I think this is you know obviously something that's being predetermined and planned, and somebody like you has a lot of balls to stand up and show that, because you're going against the mafia, I know you know that, before we dive in to, I have to ask you, you're retired, you don't have to do this. your life has been threatened in the past, why are you doing it.

I don't know what happened to me in February of 2020, but something happened, my father in-law walked into a hospital and was killed with a hospital protocol they were unwilling to bend from, kicked me out of the hospital with security, said they would no longer talk to somebody who wasn't blood related to the family or member or married to him, and they ended up killing him over the next three days under a guise of what they call palliative care, the deception of that care is they tell you, and I told the whole family that you let them kick me out of here, and this is what's going to happen, they were going pump him full of morphine, convincing you the morphine will help reduce his pain and suffering, until he takes his last breath that is the lie of palliative care.

I looked at them and I said, you've ever taken a dog and cat to a vet, they call it euthanizing and they do it right in front of you, this is what they're going to do morphine, is a drug that paralyzes your diaphragm in your heart's ability to

beat, they will kill him in front of you, this isn't to reduce pain, although morphine does block pain, and sure enough I left that hospital was allowed to come back, it was in three days he took his last breath with two full 2 hour doses of morphine into his veins.

From that moment about loss my mind, emotionally, physically, spiritually, I was lost three months, I didn't know how to reconcile how I felt without physically killing one of those hospital peoples, family members and letting them experience with my wife her family and I was experienced. it was I've never felt that way in my whole life ever, I couldn't sleep.

three months later in may of 2020, I need to understand, the world need to understand, I don't give a crap about COVID, February of 2020 I lived in Dallas TX, there was not a single case of Covid in Texas, so there was no restrictions, no masking, no mandates, no you weren't allowed to not go into hospital with your loved one, that did not exist at this time frame, when my father in-law walked himself into a hospital, and nine or ten days later take his last breath,

so Covid it wasn't a reality for me, now you're dealing with funeral, now you're dealing with the state issues, and you've got three months of me just being angry, depressed and trying to figure out how to get away with murder, not a joke and I couldn't figure out how going to do it.

thank God, I catch wind of some interviews online on CNN and other articles or other platforms and you hear every hospital administrator, every medical doctor treating in New York City, where I'm sitting just a few miles from right now doing this interview, they're one doctor after another standing at a podium being interviewed by the media, going globally and they are saying the same thing every single interview, and I watched ten of these in a row in one day, is in the middle of may 2020,

every single one of them said the same thing, there's something about this novel new coronavirus, we've never seen before with any other respiratory virus in the entire history of mankind, when we start treating this one, the virus goes from the lungs immediately and goes down to the kidneys and shuts down their kidneys, within 24 hours a mass number percentages of all people were treating

end up in acute kidney failure, and then over the next several days they die, and there filling up tractor trailer loads of bodies here in New York City.

in the epicenter of the COVID-19 pandemic, just like where September 11th happened. Oh my God, so I'm watching each one of these interviews and what I recognize is there is a genuine authentic articulation of their concerns, they're being dead honest when they're saying we have never seen a respiratory virus ever do this before, when you start treating it, it goes from the lungs which is what it respiratory illnesses and it goes straight to the kidneys and shut down the kidneys.

I watched ten of these interviews in a row in about an hour, and I was like Oh my God, they're all saying the same thing, the reason why I knew they were being honest and what put me on this trajectory to start speaking out, was three months earlier in February of 2020 my father in-law walks into a hospital they diagnose him with the flu, they put him on a hospital protocol for the flu, in that treatment they gave him, included a drug called vancomycin that has a super high percentage of causing acute kidney failure in less than 24 hours, and that's exactly what they called us with on day two,

they said he's diagnosed with the flu, next day now he's got pneumonia and acute kidney failure we don't know why he's in this, by day five he's now unconscious that's when I go up to the hospital to challenge what are you doing to him, he's on a breathing apparatus, 5 days later, his belly swollen up huge retaining water, and that's when I see that vancomycin bag hanging up with the Ivy bag, and I knew, I had to say was how long is he been on that, since day one, why did you put him on that, this is so messed up. OK. the hospital protocol for the flu this time included three antibiotics,

Jason Shurka, do you know that on the CDC's website right now, and has been there for a decade it says if you diagnose someone with a viral infection, it is counter intuitive to treat them with antibiotics, antibiotics can make the viral infection in the outcomes worse, so I brought the attention to the vancomycin to the doctor said, why you give that to him, first 5 minutes I'm in the room, and that's a part of the hospital protocol for what? for the flu, that doesn't treat the flu, it treats bacteria, all antibiotics only treat bacteria that's all,

they treat and he said well that's not the only antibiotic, we have three that's the hospital protocol for the flu.

how do you how do you explain the doctors didn't know something like that.

Yeah, they just bit their tongue and said this is the protocol, like they were going to open their mind to creativity or science or education or clinical experience.

do you think it was something intentional that they in on?

the hospital protocols are all intentional. they're all set up

I meant about the people that are implementing them on a wide basis.

you're talking about a lot of doctors,

I'm talking about a lot of hospitals, and this had nothing to do with Covid, this is just the flu, before Covid in Dallas TX, so yes the hospital protocols there's a problem here, and you're just going to tell me to my face you're following hospital protocol that you know that drug causes acute kidney failure, going to take this off right now, and they did.

which was great, so this is where it all started, I realized an experienced person and I believe this is a God thing that I was allowed to witness the medical profession poison a man that I loved, and knew and admired they poisoned him to death, hid behind their liability of worrying to be sued to actually change the protocols as I recommended on day 6, and he was unconscious by day 5, water was accumulated in his lungs and in his brain, he couldn't breathe when unconscious, now on a breathing apparatus that forcing air into his lungs before Covid, I come in and change the entire protocol with drugs, taking all that drug put him on this drug do this and do this for the next 24 hours, he pees out 20 pounds of water in 4 hours on day 6, an hour after that he wakes up, totally conscious, we're told he was dying from acute kidney failure and this pneumonia that was going to take him out at 91 years old.

Oh, no, he woke up and came to life, we go home celebrating that the doctors worked with us, celebrating he's awake and communicating with us, thank God, because all of us are obviously upset emotional, and worried about his life.

we get home an hour later, this damn profession, the nurses station calls my wife and says, we need to make you aware of something the hospital administrators and the attending medical doctors have all met with us, and it told the nursing staff to let you know we're permanently stopping the changes we made today per your husbands request, and we were putting him back on the original hospital protocol, and your husband is not allowed to step on these grounds again, we're not going to communicate with him, and my wife looks at me and goes why would they do that, she was crying.

I said because I just exposed the liability of injury from their protocol, and they can't tolerate that. well, I was up there very next morning to challenge them again, that's when I was kicked out, and this is when it changed is, his life ends up ending three days later, under this palliative care morphine overdose,

three months later, if I had not had this experience with my father-in-law, so I'm going to find the positive in this, if I did not experience and watch this happen that they held to a hospital protocol, drug you for a viral infection cause acute kidney failure within 24 hours for a different virus called the flu, I was actually convinced that the Covid patients in New York were all being pumped full of vancomycin to treat this new novel virus, that's what I thought.

so I went on to the CDC's website I just want to know what are they giving them, so I went to CDC.gov looked it up, and there was no website or webpage or tabs for Covid in may of 2020 on the CDC's website, there was one page on Covid and it said we do not have a hospital protocol per the CDC, we have adopted the NIH hospital protocol for Covid, here it is click here, So I click on it, I've never been on the Natchez website ever,

I have spent a lot of time on the CDC's website over the years, but I've never been there, and there's only one web page on the NIH's website, and it read doctor Anthony Fauci hospital protocol for Covid-19 patients, and I've never I honestly at this point had never even heard the name doctor Anthony Fauci, how that missed me I have no idea, I just don't know who he was, so I'm reading, I'm like well OK whatever, I keep reading the actual three paragraph memo, it's the only thing about Covid on the NIH's website, and it reads first

sentence, all hospitals are only allowed to use an experimental drug called Remdesivir to treat all COVID-19 hospitalized patients in America.

in the memo doctor Anthony Fauci says he told the government you are not allowed to export this drug out of this country to any other country for the first year of this pandemic, so only Americans get this drug. Then said this drug which none of us had ever heard of before, he stated there's two studies that confirm why it is he is declaring this is the only drug, medical doctors can use in this country in hospitals for Covid patients. it says it was proven safe and effective against the Ebola virus in a trial in Africa in the year 2019,

and then it says it was also proven safe and effective against the Covid-19 virus, SARS CoV 2 virus, in January, February and March in a three-month trial held by the manufacturer of Remdesivir and they had links to the studies.

now in my upset, anger retired moment of my life, I just happen to be sitting there at the table with my computer, and just click the links I had, that I'm going to click the links to these studies I've never heard of this drug, I know they're not using Remdesivir, So what does he know about this drug,

so I click open the New England Journal of medicine, it's still there go look at the study, the Ebola trial in Africa, they took four regions in Africa 2019, a year long study, PCR tested everybody just like with Covid, PCR tested all these people all over Africa confirming Ebola, which PCR test does not confirm any virus ever, but they're using it in this trial and there confirming Ebola cases and then they have four drugs that they're willing to experiment with see which of these drugs has the best performance against Ebola, which by the way supposedly at this point has a 50% death rate the disease process does,

so I am reading into the study, imagine my shock to find out that the independent Safety Board assigned to the study, because you can't have the funders of the study provide their own review board, you have to hire an independent review board to have a objective view of the data,

that really exists, right,

this independent Safety Board truly in August of 2019 is reviewing the data and then declares and publishes to the funders of the study that we are

permanently pulling two drugs out of this trial, number one is Remdesivir, why, because 53% of everybody that got the drug died, which was more than the outcome from the disease, it was the only drug that had a higher than 50% death rate, it was the only drug that killed more people than the disease does.

so they pulled that one and another one called Zmap, Zmap happened to be a drug that was put in by our Department of Defence, they put it there, was found to have a 49% death rate, so it wasn't really that much better than the disease anyway, so they cancelled those two.

now I am reading this, I'm thinking why he is saying, why did this guy Anthony Fauci say there's this drug that was safe and effective against Ebola when that drug was pulled from the trial for being the deadliest in the trial. so, I decided to go look at the funding section of that study I wanted to know did Doctor Anthony Fauci get some bad advice from somebody overseeing the trial. Oh my God, imagine my shock to see that the NIH ID department of the NIH is who funded that study, that's his department, that means the Ebola trial was completely funded by his department and the moment the independent Safety Board would have sent the memo out that were canceling these two drugs in August of 2019, because it's the most deadly and toxic drug of before, he would have been the first notified, and this is in May of 2020. May 1st, 2020 is when he announces to the world this is the only drug all American doctors can use to treat Covid-19 patients, and it was proven safe and effective.

and they only allowed in America for a period of time, yeah, pandemic.

this is so messed up. Remdesivir was only allowed to be in the United States used in hospitals here, until the FDA approved it at the end of October of 2020, then they shipped it out to other countries.

I looked at the second study for the three month trial January to March of 2020 the Ghillie, the manufacturer Remdesivir was now allowed to run on Covid-19 patients, the drug that failed in Ebola now granted approval for their own little study called cohort study, they take 53 patients from around the world that had tested positive for Covid, it gave them the drug for 10 days and 31% of all of them experienced acute kidney failure within 10 days, 10% of them had to be taken off the drug before day 10, because it killed their kidneys and they had to have emergency kidney transplants, this was the drug the New York

doctors were pumping into the veins of all the sick COVID-19 patients in New York that was causing the massive kidney failure, and in that day,

it was within an hour of me reading those studies, I hired a publicist out of Washington DC, and went into the median sent from my kitchen table, and actually did 40 to 50 interviews every week to make sure everybody could see the research studies in the truth about Remdesivir and even coined the phrase, you can't remember what the name is just it rhymes with run death is near, and that has literally gone worldwide, journalist put it in the mainstream media even, they call it worldwide known as run death is near, yeah, that's what we did, we want to make sure you can remember what this name of this drug is, because no one was ever familiar with it.

in November of 2020, the World Health Organization comes out after I've been screaming at the world for five months then come out and declare and it's still on their site, they published in the mainstream media that The WHO has reviewed data on Remdesivir and in November of 2020 published we do not recommend Remdesivir for any single covid-19 hospitalized patients worldwide, because of its kidney failure, really, what date was that November of 2020.

OK, the very next month after the FDA approved for COVID-19 patients and hospitals in America, and they start shipping out around the world and to this day still being used. from Remdesivir got two names, so the whole world, guys, will know what they are, hospital pharmacists have called me from around the world to tell me, you need to let your audiences know they're no longer calling Remdesivir, there are clandestine meetings in hospitals around the world, administrators, medical doctors, nurses there all coming together and telling them too many people are refusing the drug Remdesivir, when you say it, so you have to start using the branding name, because they don't know that one, and it's Veklury, VEKLURY is the same drug, just the branding avoid.

Well, you know there's something I never mentioned to you before, but I'll mention it on camera here today, in August of 2019, I got very sick, this was pre Covid, it was like 5-6 months before Covid, and my column like my mentor from TLS came to me, it was when I used to live in great New York,

like listen you're sick, I understand it's not what you think, I'm coming to help you out with something, and I said OK, no problem. He came and I'm sick in bed, I felt like I wanted to die, I couldn't breathe, it was horrible, again 5, 6 months before Covid, which really like started getting crazy in February, March of 2020.

He comes to the house and he starts sharing all this crazy information with me, and he's telling me, he's like listen, what I'm going say is sound crazy, but I'm telling you there's going be something that's going seem to be like some sort of pandemic in the near future, it's not what you think it is, we are doing our best to stop things like that from happening, but it doesn't look like we are going to succeed.

New York City is going to shut down, I'm looking at him like what are you talking about, New York City cannot shut down, it's never shut down the history of anything, it's not shutting down, he said New York City is going shut down there going to places around the world that are going to shut down, the economy is going to go down, you're going to see fires Australia, California, like everything that happened over the next year or two after that point I was told about it before, and then it started happening, and I started seeing all these news headlines in Covid, in the stock market crashing and lockdowns and I was in shock, now

at the time when I was sick, he gave me a few things to drink 24 hours later, I was fine. my question for you is, I still don't understand what happened and how this thing was manufactured, if it was manufactured, all I know is you now tie it back to snake venom and snakes as opposed to bats, how do you get there, how did start there, what evidence and proof do you have as well to be able to bring us from that point to where we're at today, tie it back to snake venom, because to the common man they hear that, they say you're crazy, that's science fiction, it's not real, So what can you share on that front.

Alright, so for two years I'm just out there yapping and screaming being asked to go to medical conventions to teach on the hospital protocols, medical doctors who are becoming awake to the reality of the harming toxicity of Remdesivir and that Doctor Anthony Fauci lied about his knowledge about this drug being safe and effective, they started springing up Tele medicine organizations to

help people through Covid, to keep them out of the hospitals. so I was going all these medical conventions speaking on their behalf because it's much safer to stay home. thank God, some medical doctors wanted to save some lives, that was very helpful, but two years into this, in December of 2021,

I got a text from a doctor, a lot of people know around the world as the budesonide guy, his name is Dr. Richard Bartlett, and he is an ER doctor out of Odessa Texas. He sent me a text and that text it says, "hi, Dr, if you got bit by a rattlesnake, would you go to the hospital and get Ampicillin?"

And I looked at the text

Richard Bartlett and I've been on stages for two years now, talking about Covid, I see this random text, what in the world are you talking about, of course I would go ER doctor, of course I would go to the hospital, I get bit by rattlesnake, why are you asking me this random question.

Richard Bartlett knows me enough and you mention me as a researcher, if I can't see it, if I can't make sense out of it, I'm not speaking on it.

So, everything I speak on including this interview I would've never talked about the venom aspect of Covid, if I couldn't show you and we will show you, the entire narrative Covid and is a damn illusion and they've lied to all of you.

and every single symptom of COVID-19 acutely every single symptom of Covid long-term, they called post Covid syndrome or long hauler COVID-19 syndrome, every single one of those symptoms I can show you which venoms and from what creatures and snakes are creating your symptoms,

I can show you, I can tell you, and then I can explain how to actually get rid of the symptoms with one singular antidote, that they don't want you to know, in the whole world has been lying to you about this antidote for the last at least 50 years.

just a quick question, will come right back to this, would you connect snake venom to what's in the vaccines today.

Absolutely, let's get there later, give us the history of how you got to this.

OK, so first thing is why did doctor Richard Bartlett send me that text, so he sends me the text, I didn't respond to the text, because he knows and I knew that he knew I was going to go research anti venom, I didn't know what I was going come across was this great like called Covid, that is not why he sent me the text, I had done some interviews on monoclonal antibodies, and I had shared these six studies I had found that it got sent to me by another doctor, I love and admire and said can you please look at these monoclonal antibody studies and see and tell me, do you see what I see.

for anybody who doesn't know what those are can you just give us a definition for monoclonal antibodies,

so monoclonal antibodies were the actual drug that was having 100% success rate against acute Covid patients that was being used around the world, an example of 1 during Covid, it was called Regenerx, regenerx on was actually the drug in the Ebola trial, that outperformed all the other drugs in the Ebola route.

OK, so Remdesivir is being compared to three monoclonal antibodies in the Ebola trial, monoclonal antibodies the studies I was given this will answer this for you, the monoclonal antibodies like regenerx on that we're having 100% success rate against COVID were banned by the FDA in America, in all jurisdictions of the United states two years ago.

when I go to look up that what is anti venom, because of course if I got bit by rattlesnake, I'm going to get anti venom, the monoclonal antibody studies I had been sent said that they were deriving monoclonal antibodies from the spleens of cancerous cells in pigs, in my interviews I was saying why would I use a cancer cell antibody in an acute Covid case from another animal, what about the long term effects, would it create cancer in the future or autoimmune disease in the future, if you're taking other animal cells and injecting inside of you. I said we've already got other stuff that works, you don't need anything else for acute Covid.

Well, Dr. Bartlett had an infusion centre in Odessa TX, outside the hospital using monoclonal antibodies for four months 100% success rate with 1000 patients per month, for four months straight, when he heard my interview people were sending it to him, and you might want to take care Doctor Ardis,

get rid of his concerns about monoclonal antibodies, so he sends me that text, doesn't say about Covid, if you got bit by rattlesnake, would you get anti venom.

I don't know why he sent it to me, I go online and look up what does he know is an ER doctor about anti venom, I don't know about as a chiropractor, chiropractors do not treat snake bites, so I knew he does. I looked up what is anti venom, Oh my God, Jason, imagine my shock to read that all anti venom worldwide 90% of all anti venom used in hospitals or clinics around the world to treat snake bite victims is monoclonal antibodies. so actually used isn't anything, that's what monoclonal antibodies are, I was like wait a minute, then I go on to realize,

wait a minute, monoclonal antibodies treat snake bites, monoclonal antibodies is how they get them, they actually inject snake venom into horses and cows those horses and cows produce antibodies against the venom, then the scientist extract the blood from the animals, try to isolate and centrifuge out, just the antibodies then they send them to hospitals and little bitty vials in ER centres around the world, and you get bit by a scorpion, you get bit by spider, get bit by a snake, here's your monoclonal antibodies.

now in America most anti venom is called polyclonal antibodies so they'll take like copperhead snake antibodies,, rattlesnake antibodies and whatever else snake, takes and then combine those together as multiples, because not everybody comes in getting bit by snakes knows what kind of snake they got bit by, so Americans have figured list came a whole bunch several different types and ones will column polyclonal, the whole rest of the world 90% of all anti venom is monoclonal antibodies,

So, what doctor Bartlett wanted me to know is this, if you doctor Bryan Ardis were in a life saving emergency situation, you would put trust in monoclonal antibodies, you just don't know that's what it's called, you would go to the hospital looking for anti venom, you just wouldn't know that they were going to be giving you monoclonal antibodies.

His patients coming with COVID, were being told in the media what: you should be scared for your life, you're gone die, so they were flooding to his monoclonal antibody infusion centre, wanting their lives to be saved, and that was working for COVID, and it worked 100% of the time, they used anti-venom

they are anti-venom, which means the connection, is that's how you started getting this idea of COVID is connected to some sort of venom, if an anti-venom is helping those patients

Jason, took less than 5 minutes to go to this very next thought, once I realized, Oh my God, these monoclonal antibodies for snake bites and snake bites victims, my very next thought was this, and why the rest of the world doesn't do this, I don't get it, it's just how my brain works, is how I designed, my very next thought was this if monoclonal antibodies are used to treat snakebite victims and it's used to treat venom, why is it working 100% of the time against COVID,

I thought COVID was a bat virus.

So, that's what we were told.

when I said earlier in this interview, my father in-law dies in February 2020, I wasn't paying attention to crap about Covid, for three months until I get hold of this hospital protocol and NIH's website, I didn't pay attention in the media to anything about Covid, I don't even watch mainstream media at all in my whole life, so when this hits me that monoclonal antibodies are working 100% of the time against Covid, but we're being told Covid it comes from bad viruses, but monoclonal antibodies are used to treat snakebite victims by very next thought was, what did I miss in the beginning of Covid,

so I went online and I actually typed in Google what is the origin sources of Covid, and I couldn't believe at CNN health published a paper and it reads, put on the scream, I couldn't believe it, it reads snakes could be the source of the Wuhan coronavirus outbreak in its in January of 2020, and then at the very

first sentence of the article reads snakes the Chinese crate in the Chinese cobra may be the original source of the newly discovered coronavirus, that has triggered an outbreak of a deadly infectious respiratory illness in China this winter, and I was like wait, what?

I never ever would have been on CNN or watch CNN in January 2020 and see this, you can see the date, the date is January 24th, 2020.

Wow, is that still up, interesting, yeah, still up,

and then I find this article look what this article published in January 2020, what they were calling Covid, it looks like when they called it,

snake pneumonia coronavirus outbreak in China traced to snakes by genetic analysis, really, so geneticists who specialize in DNA, we're able to confirm that the source of Covid was actually snake DNA,

so where did the whole bad thing come from, and when did that start, do you have the timeline? read this article from January 2020 and every single one of them is talking about snakes being the origin of Covid, like what where did the bat stuff come from.

at the end of January of 2020 every single one of these articles have date stamps of being fact checked, and this is when the narrative starts being turned to bats, aren't any snakes. aren't any snakes, its bats, aren't any snakes, its bats,

I wonder how the Chinese geneticists felt knowing that there the DNA experts and figured out in January of 2020. at this paper, in this paper titled cross species transmission of the newly identified coronavirus 2019,

stands for novel Covid January of 2020 Chinese researchers took the blood of everybody in hospitals and Wuhan rain there antibodies, ran their DNA sequences and see

what is there antibodies targeting, and they published what it was, they said it has you can read the summary here, this is the conclusion in summary,

I'd like to read this to your audiences, summary results derived from our evolutionary analysis suggests that the 2019 novel coronavirus has most similar

genetic information with bat coronavirus and has most similar codon usage bias with snake.

can you explain that, I'm about to, we're going to show you, so I as any human being who doesn't have a definition for a word term or phrase, I will look it up, I do not profess to know all things, so I have to go look it up, hoping other people do this too, so when it says here that it has similar genetic information with bat coronavirus and has most similar codon usage bias with snake, I have never in my entire life read the words similar codon usage bias in my life, so this is what I had to do, to go look it up what does codon usage bias mean.

Oh my God, on the NIHs' website here's the actual article the link is on the page, codon usage bias reflects the origin, really, you take that phrase out of the Chinese geneticist's research study at the Covid-19 virus has most similar codon usage bias with snake, and you overlap the word origin, has most similar origin with snake.

it makes perfect sense, really, really, and then they publish this and they take what's called a squared Euclidean distance this is a from a species with this set of DNA how far away from the DNA of what we're looking at how far away is the squared Euclidean distance genetic term I had to learn, what's the square root Euclidean distance between that DNA and all other species and the smaller that number gets the closer you get to the origin creature, and then they show you the image these are all the animals it's most likely to be in to the far left,

snakes, is the origin, farther right you go, you get away from the origin,

so the third ones a bat, in the first two are snakes, that's right, in the first snake is the crate snake, which is an Asian venomous deadly snake, the second you can see from the illustration is a cobra,

Wow, so this is what they published in January 2020, imagine my shock, that we're sitting here 3 1/2 years into this pandemic, and I'm the only one that appears to continue telling you, guys, DNA experts that we trust in the judicial court system to lay down the final confirmation that this person raped, murdered your loved one, because we have DNA evidence, those people that we

trust, those people have been ignored Fact Check away from those experts, who are geneticists, not the chiropractor figured this out, and that wasn't the only people that figured it out, these people did in January in China,

and then in April 2020 French researchers isolate the spike protein of Covid and they run their own DNA test, just to spite proteins, these little things that make this virus different than the first SARS-CoV-2 virus in 2003, said anything different is there little proteins on the outside of the virus called spike proteins, that did not exist on the first source Kobe 1, it was called SARS and MERS, and they isolate the spike protein and they run its DNA sequence genetics is due in France, and they published their findings in April of 2020.

publisher findings that these spike proteins of Covid are identical two things, a protein in king cobra venom called cobra toxin and a protein inside the venom of the Asian crate snake called bungarotoxin,

how do they implement this venom to impact us through what? I understand in some cases through water from what I've learned from you, but can you speak more on how it's actually done this,

in any of the slides, in the presentations, we've got all the research to back this up.

Sure, can I start with the vaccine really quick, but not getting the full details, Yeah, go wherever you want.

Jason, 5 billion people in this world have at least taken one vaccine for Covid, on the NIH's website right now, I want to show a document because just to set the stage for you here, so I could quote it, on the United website right now is a document for lay people to read, not doctors, for lay people to understand how they made the Covid-19 vaccines, and you've got to see this, OK here it is, the title of this document on the United website right now is understanding COVID-19 mRNA vaccines.

now Jason, if I asked you and your audiences what did they tell the world they were vaccinating people against, or to help them fight,

from what I understood, from what they told us in the media, Covid-19, OK so SARS-CoV-2 is the correct thing, SARS-CoV-2 is what they called the virus,

the virus is not COVID-19, the symptoms that you're supposedly getting from this virus called SARS-CoV-2, which includes symptoms like fever, chills, fatigue, loss of taste and smell, those symptoms are put in a category they call of COVID-19 disease, so people don't get Covid, you get something causing a bunch of symptoms or calling Covid, you cannot look in a microscope, look at someone's body and go oh you have Covid, Covid doesn't exist, it's a collection of symptoms, OK, no different than like lupus, you don't see lupus in the body, it doesn't exist, it's not in there, you don't see aids in a person, aids is flowing around in a body, virus causes these symptoms of immune deficiency that we're going to call as a collection aids.

OK so just to clarify COVID-19 and SARS-CoV-2 two different things, to their calling the virus and the expression of symptoms and that you know group of symptoms would be what we now refer to as COVID-19,

exactly right, so we're being told with the Covid-19 vaccines, asked if I'm correct this question, did the world tell us and the health agencies around the world, did they tell us the vaccine would help protect us from SARS-CoV-2 virus,

many times, and would it help prevent worse outcomes if we got another version of SARS-CoV-2,

too many times, did they tell us it would help to prevent worse hospitalization and death experiences for those who get future COVID,

really, I can hear the voice over of Doctor Anthony Fauci in my head,

right, this is what we're told, OK, I want to show you on the screen on this document that's right now on the NIH's website, when they are teaching the public, this pamphlet titled understanding covid-19, mRNA vaccines they actually say this,

I'm going read you the quote,

Please, I have it highlighted in blue, mRNA vaccines do not contain the SARS-CoV-2 virus,

What they contain?

so you cannot get COVID-19 from mRNA vaccine, alright, now I put this up on the screen the presentations last week, and whole audiences like what, OK if the virus was the issue worldwide, don't you think they would have put a little bit of this virus inside the vaccine to protect you and help you build an immunity and artificial immunity against maybe other SARS-CoV-2 virus variants, they sayings mutating around the world, is it weird to you at all at home, that they didn't put any SARS-CoV-2 virus in the actual shots, your very next question should be this, well what they put in it, well I'll show you, because they tell you in a separate pamphlet on the same website, OK ,

this pamphlet titled Covid-19 mRNA vaccine production, and they stayed here early in the Covid-19 pandemic researchers used state-of-the-art gene sequencers to quickly sequence the SARS-CoV-2 virus and then this sequence was quickly shared with the other researchers, now pay attention the first part of this paragraph, it reads early in the Covid-19 pandemic, you don't get any earlier than January of 2020,

when was this shared? this is right now, OK on the website, So what did they find in early on in the pandemic, they found that the origin of Covid was two snakes, this is right now, in a pamphlet titled COVID-19 mRNA vaccine production, and they set the stage for you to understand that we had geneticist around the world early on in the pandemic figure out the gene sequence of Covid and then we shared it quickly with the rest of world. Oh, did you?

well this is what they found, that it wasn't a bat virus, they found it was two snakes venom, in fact this is the French researchers study I took this right out of their paper in April of 2020, you'll see at the bottom of the graphic SARS-CoV-2 is the spike protein of Covid, right above their the genetic sequences identical to bungarotoxin, which is venom from the crate snake the very first one at the top, is cobra toxin from the king cobra, you cannot fall for this narrative.

OK so this is what they are you looking at on the screen, but we're going to go up into the paragraph in the pamphlet, on the NIH's website, they said they selected the spike protein gene as their vaccine candidate, they didn't put any Covid virus in there.

they just put this thing supposedly on the outside of the virus called a spike protein that was found to be king cobra venom and create venom by geneticists all around the world. so just to get this straight, you're saying that they're putting that venom in the vaccine itself.

I'm going to show you how they're putting in there, because they put in the pamphlet, OK. so you can call it, OK this is really fun, you can call it protein all you want, the spike proteins are snake protein, they're just giving them some other nomenclature using language to keep it hidden from you, but it really is geneticists over and over and over already confirmed it's actually identical to venom proteins from snakes. you can call it spike protein all you wanted snake proteins.

so they say here again they selected the spike protein gene as their vaccine candidate, which was confirmed to be venom protein from the king cobra called cobra toxin and then a venom protein from another snake in Asia called bungarotoxin, the snake is called the crate snake, alright, so they're telling you, we didn't put the virus in there, we only trying to protect you from the spike proteins in these vaccines, we don't care about the virus, if the virus was a big deal they would have put it in vaccines, if the virus existed they might have put it into the vaccines.

interesting, I don't know why they didn't put it in there, no one never prove exist. they can prove the with DNA testing that these venoms exist in every COVID-19 patient around the world, they found these venoms and every single patient around the world,

how did they put venom snake proteins into the Covid shots, they tell you right here, this is the actual demonstration, they say we take this spike protein gene and we put it inside of what is called a DNA plasmid,

what is that? I'll read it to you, it says the target spike protein gene is then synthetically manufactured and inserted into a plasmid, or a small, circular piece of DNA. so they just make this little ring of DNA and they can insert any payload they want into that plasma, and this plasmid is really little, and it gets absorbed into bacteria, into yeast, into your mammal cells, and the instruction of a plasmid is to tell whatever cell it gets into to manufacture whatever the spike protein gene is.

that's how they're putting it into the vaccine itself.

they're putting these plasmids into the vaccines and inject them inside of you.

OK, but people were getting sick before the vaccine,

Oh yeah, so the way they actually created the COVID-19 pandemic, was to spray these plasmids through the air, in your water, and in your food, and they're manufacturing tons of these plasmids around the world to create pandemics.

For anybody that's watching, that would call you a crazy conspiracy theorist, can you show us proof and evidence of that.

Yeah,

Let do it.

Yeah, so I actually came out with a documentary called (Watch The Water), freaked out a whole lot of people, made a whole lot of medical professionals upset, because they all said you can't drink snake venom, because I propose they're putting this in our water systems, you just drinking it.

I'm a very logical guy, the idea of locking down the world, and telling everybody to stop breathing on each other that going to spread this respiratory virus to each other, and roll on lock down in the worst variant of COVID, makes the whole world sick while we're all locked down, how they get it to us, how did they get spread all of us, in our houses and we all have air conditioning, and filters in our home, and HVAC units, how did we all get this respiratory virus inside of our bodies in our houses.

We only paid the government to deliver one thing into all of our houses, and every industrialized nation around the world water.

Water

snake venom is water soluble, did you know that, I didn't know that, I had to look it up, I was like could they be doing it this way, can venom of snakes be absorbed through your skin, like in a shower and in a bathtub, yes, it can, I did not know this, I had to go look it up, they're conducting studies all over the world for decades,

how do we get venom of cobras, crate snakes and marine shell creatures in the ocean's venoms, how do we get them into the bodies of people, they know they can get you to drink it, they know they can inject it, and they know it will get absorbed right to your skin through water, and they publish it over and over and over they've been doing this.

when you get to the DNA plasmids, remember vaccines and vaccine agendas forever, has been there's a flu season, you've all been exposed to the flu in order to protect you from this new variant of the flu, we need to give you this vaccine, we're going to put a little bit of the flu in you, a little bit this.

This different.

so that your immunity can create some reaction to that flu virus, that we gave you in the shot, so that when you're exposed to the flu in the future you already have immunity ready. They just told you that they didn't put SARS-CoV-2 into these viruses in these vaccines. they only put DNA plasmids inside to protect you from COVID.

what you're basically, I'm going to say, implying here, but it's even more than is there is a form of like a mass genocide going on,

oh, there is a mass genocide going on, for sure, start in the hospital by the way

OK, so let me play devil's advocate for moment,

Sure,

you're saying the government in the United States is now putting this, you know through everybody's water system, what about the rest of the world, the whole world was getting sick, basically simultaneously more or less, so you're saying that this was something globally beyond just the United States government.

for sure. The entire world.

How do they orchestrate something like that,

through the Water system, super easy, this is actually an agenda that started out in the Nazi Holocaust concentration camps, they had two things they discovered in Nazi Germany that they could actually control their people inside of those actual camps, two things,

they do that to control their water systems, and they had to control the vaccines injections into them, and they were experiencing experimenting with metals, to see they control and subdue their actual resistance, and then they knew they could poison them and subdue them through their water systems, when we brought all over the Nazi war crimes agenda people into the United states, put them into the CIA, put them into the NASA, just a few years later, when the water treatment systems of America were built.

Really,

and this is when the vaccine agenda in America took off, they're using the water delivery systems to create pandemics, and there was a warning written in 2007, there's a paper written titled "water and terrorism."

it goes through all major industrialized nations in the whole world, where the weaknesses are inside their treatment systems for water that would allow any terrorist, organization, group, country, you name it to put anything they wanted into the water deliver it to any communities or villages create a pandemic, weaken those individuals and be able to take them over with war, or by military force,

so it's basically weaponizing our water systems.

they list in 2007, they actually put in the document, what can be put in your water systems to create these pandemics, done, and performed and orchestrated by what he calls terrorists, and he list things like this, weaponized Ecoli bacteria, weaponized geez and suspended it.

you can put defence toxins from animals in the water, and make people sick, defence toxins from animals are venoms, and then they go so far as to tell you how to manipulate and allow those toxins poisons anthrax, included diphtheria toxin, included rhenic and they go through all of it,

and in the flipping document it tells you how to make those deadly toxins poisons, and pathogens how to get them to die with a certain amount of chlorine and how to reduce the chlorine to let it live. oh wow.

you could create an outbreak in your town or in your city, in New York City, you could create an epicenter outbreak in New York take just a few skyscrapers and put venom in that water, send it up at those actual apartments, and you

can make thousands of people sick overnight by taking showers, bathing in it, drinking the water, they're going to drink the venom, they're going to break out with what's called respiratory failure or arrest, they're going to end up in New York hospitals are going to be fill you up with Remdesivir,

Throw a whole bunch of dead people who died from acute kidney failure from a drug and set the stage for a global pandemic, using America's media conglomerates, congratulations, Psycho

the DEP Department of Environmental Protection what they're supposed to be? they can identify certain things and markers at our water levels, have you ever gone into that aspect to find what they're reporting in the water and found that the evidence within their water.

Yeah, one of the things that was bothering me was how are they get into the homes of people, while we're all locked down, we were not breathing each other, how do they get the whole city sick, we were not breathing each other at all, we at home,

the water was only way that I could see that it would even make sense, that they could get this into us, obviously there was a massive political engine behind Covid-19, so and it was global obviously to many of us, so something had to be orchestrating that anyway, so the water is what made the most sense to me. and was your question?

if you've ever gone into the actual water levels of reporting to see if what you're saying is seen in the reporting?

yeah that's actually a very good question because no one else was looking at this, I had no idea why no one looked at this. but before I've got the text by doctor Richard Bartlett that sent me off on this quest to find out what is the origin of Covid, and the venom aspect of Covid, I was already reporting on stages that the CDC was using this thing on their website, it's called CDC's wastewater surveillance tab for COVID-19,

so when I showed audiences this, I was like they're saying something on this document that they're serving water treatment plants their PCR testing wastewater in your town, and then they are predicting an outbreak of COVID in your town to be 7 to 10 days after they test your water, this is what they

said, and when you read that, you're like wait a minute, when people flush their toilets in a city. this wastewater supposed to be leaving the town,

if your PCR testing the water and you're seeing the levels of Covid or going up that means Covid already went through those people, they flushed it out of their body into the toilet, so how is it coming out your testing wastewater then they even say it takes about four days to get the samples to the CDC in Atlanta to be tested, and confirmed for results, then they give those results to the city they tested it in, and from there they would then predict a 7 to 10 day later outbreak in that town, I am like that doesn't even make logical sense, if you had the virus in your body in that town, and now it's in your poop, it already went through you would have already been sick,

so the rationale behind how they were using this technology of surveillance, I was shocked to find out that the CDC had been doing this in 400 cities in America since January of 2020, that's when it started, yes,

they report that they started doing it when journalists were asking them in October of 2020, when a journalist found there was an area roped off for example in Houston TX, there was CDC and people are out there in this water treatment plant testing samples, and it was all roped off this journalist wanted to know what's the CDC doing here in October 2020, and the CDC people representing the CDC, the contractors said oh the CDC is testing water for Covid,

the journalists like, how long have they been doing that? and he goes oh they've been doing this since January 2020, then the journalist wants to know what's all the data that you guys have for all your test results from January to October we just found you at this water treatment plant, and do you know the CDC to this day has never actually released that data from January to October of 2020, of any of their findings in any cities in America,

and I find that is problem, why don't you want to release what you found from January to October 2020, since then you guys need to be aware the national emergency for Covid-19 by Joe Biden administration was actually dismissed may of 2023, just a few months ago, but do you know that since 400 testing sites at the very beginning of Covid and all the way through last year, you know the CDC has now increased that to 2000 cities,

and what did you just heard, you just now heard that Joe Biden, you can expect out of his administration, you heard you can expect lockdowns America coming this month for the next wave of Covid, you better pay attention to what they're doing, because what they're saying to you doesn't make sense, and you so know, a lot of medical officials around the world reached out to me with your wastewater stuff doesn't make any sense,

oh, yes does, because it didn't even make sense to Doctor Chetty in South Africa, and the beginning of Covid, he actually came out and said how are they finding a respiratory virus in wastewater, people aren't coughing into the toilet, how is the virus getting into the sewer,

you can see through urine feces things like that, you could poop it out, pee it out, but if you have something you breathe into your mouth and you have now an immune reaction to a virus in your lungs, what do you do to get it out of you, you cough it out in mucus and phlegm, people don't go cough their phlegm and mucus into the toilet, to go find this virus inside the wastewater, you are pooping and peeing it out, so even doctor Chetty was like why aren't we tracing this supposed respiratory virus, he's an MD by the way, why aren't we tracing this back up into the bowels where this virus is coming from.

if I ask you something, I don't know you know this, but have you ever bite to an apple, never gotten a piece of fruit that you inhaled into

yes, tricky and what's your immediate reaction,

cough, you cough it out right, just actually goes somewhere and you don't know where it went, but you breathe, thank God, yes, do you know that piece of food did not get digested in your lungs to end up in your poop, do you know that your body breaks it down with macrophages and immune cells end your actual lungs, and then takes it into your bloodstream, and into your lymphatic system.

Wow, alright, so if you inhale a piece of apple into your mouth and into your lungs it will not end up in your poop or end up in your wastewater. that's not where it's going, does ends up in your poop and in your wastewater is what you swallowed into your stomach and into your intestines,

so the food you eat goes into yourself Esophagus down to your stomach intestines and you poop it out, so guess how this virus was getting into

everybody that they're sitting there testing the poop water from, you swallowed it, for sure you swallowed it, and it's the only thing that makes sense about this whole thing, so when we get to these DNA plasmids,

I didn't know about DNA plasmids until about four months ago, actually never knew these things existed, so I found this on at NIH's website, I was like Oh my God, you're putting DNA plasmids, what are these things, where they come from and I will give credit where it's due, there's a guy named Kevin McKernan who brought up the fact that these DNA plasmids exist, doctor Henry Lee starts sharing all this research with me, and I was like Oh my God, this is how they did it, there was no virus, they used DNA plasma to do this.

I just didn't know that geneticists around the world have been making plasmids since the 60s and putting snake venom another venoms inside of DNA plasmids that they call spike protein genes, I know they were doing that, I had no idea. you just need plasmids and a venom protein gene inserted inside of that, and then you put inside that plasmid something called a promoter, it's an instruction in genetics, genetic term it's a promoter that tells the DNA in a mammal cell, or the DNA in a bacteria, or the DNA inside of a yeast cell, or fungal cell to make the spike protein gene and spit it out of you,

so bacteria knees sucking the plasmids your own cells, sucking the plasmids and then they release the actual venom into the body or the environment wherever it is, and that's how they got Covid inside of you.

just so you know anybody out there living with long hauler COVID symptoms after having a mild case of code you had DNA plasmids with despite protein genes of king cobras and bungarotoxin in your body they called Covid, even PCR tested found that, and then you have had lingering symptoms for a year and a half to two years ever since because in your body these plasmids were what got inside of you now there in your cells, there in bacteria in your cells, and in your bowels like E coli in what's called enterro bacter cells and they're also inside of yeast, inside of your bowels which can be called candida or yeast, all of that microbiome in your bowel is what they are weaponizing to be biological weapon manufacturing facilities in your own body.

so now you are creating this more within

you were non-stop making the venom proteins over and over and over and over as long as those bacteria yeast in your cells are in your body manufacturing.

Question, and this has already been confirmed.

by the way, animals, babies, animals I don't really see get sick at all, and babies very very little, how do you explain that if we're all drinking the same water yeah, this is phenomenal so and to speak about the water DNA plasmids in my conversation yesterday, i will provide all the slides here for your audiences in 2017 in 2019 they discussed doing experiments in water systems in America with DNA plasmids and they want to know what's the effect of chlorine acids UV light and hydrogen peroxide in these water treatment facilities, they want to know does it kill the plasmids, does it destroy them, does it hurt them and at what levels, does it affect them and they were able to confirm that chlorine does not have 100% cure rate to kill DNA plasmids or destroy their structure that plasmids infused with venoms are actually very resilient to chlorine acid, UV light, but not hydrogen peroxide,

so will show you that, and so we just found these studies to make sure, you need to know, just leading up to the pandemic in 2020 in America, they were doing research with these plasmids with the spike protein gene you're seeing in the COVID-19 shots, it's also what created the symptoms you're carrying right now acutely Covid and long hauler COVID symptoms, and then they needed to know, imagine my shock in the irony, there so easy to discover and unveil their actual various activities, they had two for four years leading up to the pandemic, now test their final discovery, can these be suspended in water, what is the effect of chlorine, sunlight,

because there's Aquafina all over the country right, delivering like canals, delivering water from some states to other states, but they're exposed to the air in the sunlight, they needed to know does UV light destroyed the plasmids, what happens when we treat the water that people get in their homes with hydrogen peroxide, does kill plasmids, Oh my God, hydrogen peroxide did, chlorine and the UV lights didn't, incredible. they needed to know that this is going to work, it could be sustainable and then they released it.

so again, how do you explain the pets and the babies?

when I came out with this snake venom theory as they called it, and that they were doing it through the water king cobra venom and create venom.

when I woke up the next morning after they "Watch The Water" documentary scientists from around the world that have been connected to in conversations of my e-mail were sending me all these research studies, because it was the final thing for them, they couldn't figure out for the whole two years of Covid, no one could explain to medical professionals and scientists why this respiratory virus was affecting adults but not babies, and children until now

and to be honest with you, I actually didn't do that research, these people did, so there's a bunch of people around the world that wanted to know what is the difference in children and adults when it relates to snake venom, and what is published around the world since the 1970s, is that children are not as affected by venom as adults are, babies, children, adolescents as you get older, you're more susceptible to the venom, and you know what they publish is a natural inhibitor or a blocker the toxic effects of venoms in humans,

melatonin hormone, and you know what babies, children have twice as much as adults do melatonin,

animals as well, dogs, animals, they're always sleeping, this was the final thing for all of them when they found the studies were confirming that melatonin by itself as a hormone, blocks 50% of the toxicity of all venoms worldwide, they're like Oh my God.

While we're on inhibitors, what other things are inhibitors for something like snake venom, and I'm curious to see if there's a connection between certain things that were banned in the United states around the world.

there is a huge connection, so and I'm really glad you brought this up, I did not know this interview was going to be about, I didn't know it was going to be called Antidote, but God I was hoping you were going to ask me this, when you told me this morning that the title was.

OK, in April of 2020 you have the studies you're going to share with the audiences, you got to. they showed improved that the DNA sequence of COVID-19 was identical to cobra toxin, bungarotoxin and then when I showed the

graphic, shows there's three parts of really close similarity to the rabies virus genes pieces of it of the rabies virus, and in April of 2020 the geneticists said, the French scientist said this finally explains all of the symptoms of Covid, cobra toxin, bungarotoxin and these rabies virus segments,

and what they said was is all around the world what you're hearing is that the SARS CoV 2 viruses spike protein is binding to ACE2 receptors in the body that make you sick, people at home don't worry about that, they were saying around the world in medical journals and all the doctors were believing it, on the outside of your cells are these things called ACE2 receptors as two is acetylcholine receptors at chemical that transmits information from one cell to the other, they were saying ACE2 receptors or what the spike protein was binding to men getting inside your cell to cause an infection called Covid, these researchers in April 2020 said no, no, it isn't a ACE2 receptors, in fact it can't be ACE2 receptors, we just conducted a study and confirm that ACE2 receptors don't exist in the lungs, so this can't even be a respiratory infection, do you believe that?

there is no ACE2 receptors on the outside of the cells in your lungs, but they're telling you this virus is entering your lungs cells by going through the ACE2 receptor to get in, and they're like but there are no ACE2 receptors on the outside of your cells in your lungs, so how can this be a respiratory virus.

cobra toxin, bungarotoxin of these two snakes in rabies virus all target 1 receptor in the human body, and they're called Alpha 7 nicotinic acetylcholine receptors for short, nicotine receptors, there we go, but they were specific they said it's Alpha 7 nicotine acetylcholine receptors in this finally explains all the symptoms of Covid, because they said in April 2020 the unique thing about cobra toxin and bungarotoxin from these two snakes these are neurotoxins, meaning they don't target just the lungs they go to your brain and across the blood brain barrier,

immediately and they bind to what are called Alpha 7 nicotine receptors in your brain stem and when venom hits them it shuts off the cells function of that nerve, and the nerves in your brain stem control your diaphragms contraction to breathe and your heart rate's ability to contract to pump blood, and when

those neurotoxic venom proteins hit the nicotine receptors it suppresses the diaphragms ability to contract,

and then the animal or the human becomes hypoxic and goes into respiratory failure, hypoxic meaning not oxygens, low oxygen, remember everybody was wearing pulse oximeters for the first time ever, I don't even know what that was except for people in hospitals using them, now everybody had one from target, Walmart, everywhere around the world, everybody's put on their finger watching their oxygens go down, they all publish their this is a side effect of venom, this is how venomous snakes kill their prey by paralyzing the diaphragm in there.

what about the taste and smell

so when I said they said it answers all the questions to all symptoms of Covid, every single nerve has Alpha 7 nicotine receptors the nerves in your tongue that control tastes, when venom hits it, it shuts off that cells function, it doesn't kill the cell, it just shuts it off,

so if that cell that God designed to put inside of your body, is designed to taste and no longer will taste as long as the venom is bound to it to the nicotine receptor, you also have nicotine receptors in your sense of smell nerves in your brain or in your nose called the olfactory bulb, and when venom would hit that, it would actually shut off your sense of smell now.

in this paper in April of 2020 they said all the symptoms of Covid it can be explained by these venom proteins, they're calling this spike protein from these two snakes and it is explained by these nicotine receptors they all target, in this finally explains, Jason, April of 2020 this finally explains why around the world when hospitals were emptied to get ready for the flood of all these sick people, why it was smokers were the least affected worldwide,

you know I found something interesting when I looked into that, the hospitals published that, but I saw based on your work and what you brought to the surface, and I think it was the CDC and a few other you know agencies out there whatever you want to call them came out and said the exact opposite, can you speak more on that,

yes, in this April 2020 paper by the French scientist, they said the reason why smokers are being affected is because of the circulating nicotine in their body and nicotine has a 30 times higher binding affinity to those receptors than venoms do, so if there's nicotine floating around in your bullet or in your brain will take over,

it will release the venom and bind to nicotine that's how these receptors are designed perfectly to only grab on to nicotine, so they said the benefit of the nicotine and smokers is helping people, they did not tell the world to go smoke, but their actual document reads we are so sure about this, because even Ivermectin is being touted around the world, as showing proof to stopping the SARS CoV 2 replication and the worsening outcomes for Covid, and the world doesn't know this, the medication still doesn't know this, unless they've watched my presentation, they published Ivermectin also binds to Alpha 7 nicotine receptors this is how it's working it mimics the effect of nicotine.

and you're saying Ivermectin is also stronger than the venom, it is, so will override, but it is not as strong as nicotine, so it will not protect everybody from the venoms, the dosage will be specific nicotine is the highest potent affinity they call it the binding to those receptors even over Ivermectin,

and I want to speak to that, there are people around the world even medical doctors have been taking prophylactically Ivermectin for two years, and they still have their long hauler COVID symptoms, when I tell them to chew nicotine gum, they all report within three days all their symptoms going away. they have that going into them every day, but it's not doing the job, it's because the body is designed to grab nicotine more than anything else,

I've seen a lot of people over the past month to month specifically because of your work, inspired by you and what you bring to the table, start walk around with nicotine patches, and I'm looking like what's going on here, the nicotine patch to my knowledge and the rest of the world, is to help you wean off of wanting to smoke,

because we have this association with nicotine addictive terrible horrible you want to move away from it, so can you clarify your view in your perspective of nicotine with any nuances, because when I heard it for the first time, I'm like well what you know it's what, first, because it's it sounds crazy, we need to

acknowledge that elephant the room and then explain it, because most people will hear that be like what is this guy talking about.

Yeah, so I don't know how long you want to go for, but this is going to be an incredible opportunity to educate and save a whole lives around the world, OK and I really mean it genuinely, this is a miraculous opportunity to help so many people, you ask prior to this question in April of 2020 French researchers in geneticists confirm and then publish that nicotine and smokers and Ivermectin is working against Covid,

it because it binds to these receptors better than venom does, their very last statement in their actual paper was a request to all governments around the world to invest in funding studies using nicotine patches, nicotine gum as the Antidote to Covid Pandemic. the very next month that was April 20th, the very next month in May of 2012, Anthony Fauci, Joe Biden, going into the media, produced shows everywhere in the news, everywhere telling the world that new data has come up that smokers are the highest at risk for getting Covid, and they dying in hospitals around the world,

America, there is no better time now to quit smoking

This is how far the lies go, alright, they flat out needed people to quit smoking, so they would get sick to buy into their vaccine agenda in the future, because they weren't getting sick those that were smoking,

Alright, now you're asking about the nicotine patches,

That's crazy, what you just said, is the fact that it goes that deep

oh, it goes way deeper than that, and we're going to get into this, because I couldn't believe how far this goes.

Immediately, People responded including my wife who had no taste or smell for two years after having a mild case of COVID, and had for six months ringing in her ears called tinnitus, that was so debilitating, she couldn't watch TV, she couldn't hear me talking, it was driving her nuts for six months, I was giving her every nutritional supplement, everything, we even tried Ivermectin,

it doesn't work, nothing was working, when I asked her to do the nicotine, she said, first response was I don't want to try nicotine product, I don't want to be addicted to nicotine.

and I was like honey, just try the nicotine, nothing else was working. these scientists said it's working right; we should try it.

two years she struggled with this, everyone do it, but when my (Watched The Water) documentary dropped and I said the Antidote is Nicotine, go get Nicotine patches, Nicotine gum, people around the world did it.

my wife didn't want to do it, she was worried about the addictive part, it wasn't until a medical doctor contacted a media outlet and said get my story to doctor Ardis please, a medical doctor had gone deaf in Australia in her right ear after having a mild case of COVID and she had been confirmed by other medical professionals that she had 100% hearing loss and would be deaf for life, as a side effect of COVID, she went to buy nicotine gum and chewed it for 30 minutes and something she felt like air in her ear.

Oh my God. That quick,

and then at 45 minutes of 1/2 milligram nicotine tablet gum, at 45 minutes 100% of her hearing was restored.

Wow!

OK so when my wife hears this being reported to me in an interview in my house, that I'm just participating in via the computer in the Internet, she leaves without telling me, goes to Costco and buys this case of nicotine gum, but doesn't tell me, and then starts chewing it, four times a day for 10 minutes and spitting it out, and on day three all of her symptoms disappeared.

after two years of not having,

after two years, OK.

when I say this is really important my wife was hesitant to try this, because of the worry of addiction of nicotine, do you want to know how far the deception goes and how far the lies go,

that was going to be my question about the addictive factor.

everyone at home look up on the Internet right now, look up Harvard 2015 study nicotine is not addictive, so they do an animal study with nicotine, they want to know just how potent of an addictive substances nicotine in 2015, and they can't get any of the animals to be addicted to strict nicotine, and then Harvard submits FOIA requests of the federal government to find out how did the tobacco giants make their products addictive nicotine, isn't the addictive substance because we've all been lied to.

Harvard figured it out in 2015, they get the documents from the 1970s and 80s, the tobacco giants at that point started to make what they called light cigarettes, and they couldn't get anybody to rebuy them, because they weren't addicted to them, they weren't addictive enough.

so they had nicotine in them, oh. yes

so, what was the difference between those other one

they just reduce the amount of tobacco product in the cigarettes, however they did it, may be made smaller, to make them lighter, who knows, I don't even get that far, I didn't even care, because what was revealed was the magic, they hired chemist to come in and actually tell them how to make our tobacco products addictive, because people are buying.

this 70s, and chemist goes will be easy, he just adds a chemical called pyrazines to the nicotine into the tobacco plant, everybody will be addicted to it.

how do you spell that,

PYRAZINES, they add 2 products to enhance flavor profiles and aromas.

and they're super addictive, in fact Harvard published at the pyrazines are what create the dependency for all tobacco product, including nicotine.

let me just recap for a second, nicotine isn't an addictive,

right,

Harvard proved in 2015,

Right,

in the 70s, the industry basically hired chemists to figure out how to make it addictive to sell more,

yes,

that's when they introduced pyrazines into the equation,

yes,

and that's what makes cigarettes addictive today.

Yes, and then they lied all of you and said tobacco products cause cancer,

Oh my God, we've heard that too

wait wait wait wait,

that's crazy,

one question, there are those cautions on, you know, the cigarette boxes today, I think it's by law, where it says caution, nicotine is an addictive substance, stay away from it, blah blah blah blah blah, if Harvard proved what they proved in 2015, how is that on the box,

that's true, right, I have the same question for the COVID 19 vaccines, how do they still say there safe and effective.

fair enough, we are live in messed up world. I got it.

so, I guess you're just free to label whatever you want, I guess they lie to everybody in the whole world.

I guess people just get away with their crap, I have no idea how they do this.

all right,

so they told you also that tobacco and nicotine are also carcinogens that cause cancer, lung cancer, did you know that right now on the FDA's website they list that they have approved 600 chemicals to be add to tobacco cigarettes and tobacco snuff that are synthetically manufactured chemical 600,

but they're going to tell you tobacco and nicotine in tobacco are the carcinogen, did you know that the paper of cigarettes in the 70s, eighties actually they laced it with arsenic, do you know that arsenic is a cancer causing chemical and you know they started adding sugar into the tobacco product inside the cigarettes, and when you burn sugar and that sugar gets inside of your lungs

where arsenic is do you know that sugar is an immune suppressing , and allows cancer to thrive,

so, you can't trust the entire narrative you're hearing about tobacco, and this is going to be way worse than you think about just venom being at plasma causing COVID, and then these vaccines, because you're going to realize just how far they will go to lie all of us to make us sick, disease, it's awful in the perspective of tobacco and nicotine.

so, when I say nicotine is not addictive, in January of this year, Jason Shurka, there's a published paper, they collected people from around the world, who had a myriad of what they compiled were 21 total long hauler COVID symptoms that people had to be having still for a year and a half, after having COVID unrelated vaccines,

this year January 2023 they wanted to do a study to see how many of the symptoms of people struggling with COVID-19, can we find the worst cases, and then can we give them a treatment that will cure them of their symptoms finally, after exhausting all of the measures, medication, supplements, rehab, some of those symptoms are these.

so think about this at home people, does anyone you know still love who had a mild case of COVID ever in the last for years, do any of them still struggle with loss of taste and smell at all, do they struggle with any ringing in their ears at all, do they struggle with any cognitive impairment at all, do they struggle with any motor deficits, picture Parkinson's shuffling their feet, do you know anybody who's had that since having COVID, do they have exercise induced lethargy,

do they have dyspnea which is the inability to take a deep breath, are they challenged breathing, likewise, are you seeing people in your life walking upstairs and having to stand there to catch their breath, still two years later after having a mild case of COVID, do you know anybody who's struggling with tachycardia arrhythmias or palpitations, chest pains at all, since having COVID, do you know anybody that you love at home, and just want you to know, the reason why I'm doing this, 37% of all people worldwide who had any COVID are reporting these symptoms right now.

oh wow

So, if you don't know somebody, it is because you are not going outside, you don't call anybody, you are hermit.

so when I say do you know these people, you should, do you know anybody who did not have diabetes, and then got a mild case of COVID, now has been diagnosed with a diabetes.

that's one of the criteria, do you know anybody who did not have high blood pressure before, they got COVID, year ago, two years ago,

and now have been diagnosed with high blood pressure, and now high blood pressure drugs for life, do you know those people. Do you know anybody struggling with insomnia since having a mild case of COVID, do you know every single one of those symptoms is actually caused by snake venom.

All of them.

and do you know the study in January of 2023, did you know that they actually said, we're going to do a treatment with these people still struggle for a year and half, but nothing else is free you have your symptoms, and we're going to do one thing and one thing only for six days only, these people have struggled for two years, here and after two years, they only asked them to do one thing for six days.

and Jason, 100% of all their symptoms went away,

what was that one thing?

A 7-milligram nicotine patch,

every day,

once a day, they asked them every morning to put on a patch of 7 milligrams nicotine patch, world they only sell three types, 7 milligrams, 14 milligrams, and 21 milligrams, they asked them to take the smallest patch size and wear one, is there on their arm or leg, or anywhere,

put it on your body, every morning put on a new one, for six days only, over 100% of all their symptoms went away, that was this year.

Oh my God, the French researchers in April of 2020 begged governments around the world to use nicotine patches, nicotine gum to rid the world of the pandemic, and they all turned their back and then lied to all of you, and then said don't trust any nicotine containing tobacco product instead.

OK, people this brings forward, you already, oh in the paper they described why they hypothesize this was going to work, and they quoted 2 studies, and they said because the spike protein gene of COVID is from king cobra venom and from crate snake venom, and they target nicotine receptors, and we hypothesized nicotine because it has a binding affinity 30 times more, 30 times more than acetylcholine, and venom it would release the venoms, and the symptoms wouldn't come back on.

now I want to explain, this may sound technical, but you got to get this, and we'll show the world this, on every single cell of your human body, Jason, I don't know this, every single cell of your body has nicotine receptors,

I didn't know that

every cell, macrophages in your body that clean up all the dead disease cells and toxins, your T cells B lymphocytes, everything that protects you, and heals you, every one of those cells as nicotine on,

Jason, beta cells in your pancreas that release insulin to control diabetes and blood sugar, beta cells are controlled by nicotine receptors, and when venom binds to a nicotine receptor on a beta cell, every time they do that, venoms are called antagonistic to nicotine receptors.

what do you mean by that

antagonistic means it shuts off the receptor, so you have these cells float around,

interceptors other, picture a light switch on your phone or on your wall, an antagonist will turn off the light, and an agonist is what they call it, then agonist turns on the light.

which would be,

the new function of the cell, would be to turn on the light with nicotine, and agonist the most perfect agonist in nature, and then you turn it off with the

two topmost published antagonists are snake venom and cone snail venom in the ocean, antagonists nicotine receptors,

other than those associations that we have with nicotine, because generally people don't go to cigarette smoking things like that, now is there anywhere in nature where we can get nicotine, as this nicotine a natural thing, that we see in nature, in food or whatever maybe.

Yeah, it was one of my questions, in my life I believe God created us, and created this world, so if he created the tobacco plant put nicotine into it, what other plants do that inside of, so in the last year, I did not know this, until this year, just have to ask questions, to go research.

do you know that the second highest containing nicotine food or plant in the whole world is eggplants,

no, it's tobacco, and then eggplants, do you know every nightshade vegetable has nicotine in it.

can you list those for anybody who has watched.

Squash, Zucchini, those nightshade

tomatoes are nightshades, there's red tomatoes have nicotine in them, and do you know that green tomatoes have 10 times more nicotine than red tomatoes does.

does anyone in the world know that every white potato you've ever eaten has nicotine in it, did you know every cauliflower you've ever eaten has nicotine in it, did you know celery has nicotine in it,

and then I'd like to ask you at home, if nicotine is so addictive, why are more people addicted to veggies?

And have you ever had a coworker at work, have you ever heard this walk by your bosses, managers office, or ever heard of other coworker begging for a celery break, you're going crazy, I going get my celery break outside, no, that's because nicotine is not addictive, but they are begging to go outside for their tobacco breaks of smoking, because they added pyrazines to make nicotine addictive we altered it, these vegetables that I just listed all have nicotine in

them, and I didn't make them, science didn't make them, nature made them, God made them,

in my opinion God made them, and in my opinion I'd like to know why it is God put that into our food, and then why did he design us to have nicotine receptors in every part of our body, if we weren't supposed to benefit from the nicotine in these plants, how many people do you know have a general understanding that the better food they eat, the better their health is and the better food list includes the veggies, you all do, is it amazing that God would put these foods at all these people are preaching they reverse diseases with, with eating it's curing cancer, is curing ultimate disease.

if they will just focus on eating those veggies more primarily than processed foods, and refined carbohydrates, it's incredible, God got it right the first time,

would you say that the levels in those foods naturally could be enough to help somebody that's dealing with something like wife was dealing with for two years, or do you need patch for more concentration.

the patches of more concentration, tobacco as the highest content obviously, so the nicotine patches, nicotine gums have a higher dose, but when you're talking about a six day window of time to really relieve people of suffering they've been going through for two years, why would you not try it, six days of nicotine, in the study by the way they published for anybody reading this paper if you're concerned about dependency on nicotine, they said not a single one of the participants after day six even thought about a nicotine patch, or even wanted to nicotine anything

my wife finds that odd everywhere we travel we travel all week, every weeks do presentation somewhere, thank God people still want to listen, but sometimes we leave will forget the gum or forget the patches, i wear the patches every day, she chews the gum everyday, just how she likes it, I wear it for prevention, I just wear a 2 to 3 milligram patch, I cut them and wear one everyday, why if it benefited smokers to have a little bit nicotine circuit the body, why not, if God put into plants, why I'm questioning what He created.

I'll use benefits up, so I just want you to know, when we leave it's really odd, when we get home and we see the nicotine or see the gum, were like oh man, yeah, but you would think you would be super addicted to.

one shocking reality for my wife that it is not an addicted experience, and the researchers actually said not a single person had any dependencies whatsoever. and they don't expect anybody else in the world to have it either.

one of the big reasons, I really wanted to focus on the Antidote, why we named this interview the antidote, is not just because we need something for what happened in the past, but right now we're seeing headlines come up all around the world, like you said, there already started to announce, you know masks, mandates, potential lockdowns and so on and so forth, meaning they're planning for another I'll say it like this pandemic, because we understand that it's not exactly what they told us it was.

Now, back in April of this year 4/5 months ago, I was given information that I'd love to hear your thoughts on from the TLS organization, they asked me to put out information it was a four- or five-minute video, having to do with a future outbreak and pandemic that's being planned, that people need to prepare for through awareness and knowledge,

you are a part of that plan, that's why we're sitting here right now, at the time it was on April 4th of 2023 when this came out I think, it was April 4th of 2023 they basically connected the avian flu to something that they're going to be connecting to the future of what we're seeing, now with you know future outbreaks the coronavirus and so on and so forth, what do you know about that, what do you know about that's upcoming, and will this Antidote that you're speaking about with nicotine being now a preventative to this future outbreak, or pandemic that we're moving into.

that's a great question, so even when you just ask me that question is like when you said that, that I was a part of this for this very reason of what they know is coming, all the sudden I got chills, because I was like Oh my God, I actually felt the impression to go research something just like five days ago, because I felt like somebody needed to hear something about what there bout to release, or what they're going to tell us is a next pandemic.

yeah and it is actually very identical two of them, so there's going to be two discussions, you're going to hear really three already, you're hearing about this new variant of Covid coming out in America called Eris, supposedly in September this month sometime, don't worry about that crap, you can let that go, don't worry about that, what they are going to be setting the stage for is something they're calling Ebola virus and Marburg virus outbreaks, and that's the impression that I want your audiences to know about it, and I believe is the warning they need to have,

so I want you to be aware that in the last 10 years, they have been studying what are plant based extracts that prevent the Marburg virus in the Ebola virus from getting inside the cells of a human to infect it, and they've published what is the most effective thing to do that and for these two supposed viruses, they actually target entry into the cell through something called TRP TPC two receptors, and if the TPC two receptors are blocked those viruses can't get in and you can't get sick at all,

everybody will just eliminate this supposed infection for both Ebola and Marburg, so then I looked up what are TPC two inhibitors and just for the audience, I didn't care to know what TPC stood for, I don't even care, I just want to know what do they know in nature blocks this receptor from allowing a virus in.

they published the most potent thing that actually does that is a component found in grapefruits and in tomatoes, and it's called and in GNEGARININ it's a component found in tomatoes and tomato paste, it's also found in high levels in grapefruit, and it completely blocks the ability to get in, now I do have to speak to this though, once again in nature, there's a solution already.

the Marburg virus is identical to and if I can give some love to Doctor Vladimir Zelenko, Doctor Zelenko texted me a month before he died and he said Doctor Ardis, that the next pandemic that's going to be coming is going to be coming out of China, is going to be called Marburg virus, and I said hey Zev, it's great to hear from you, and he goes, I just want you to know that if I die and something happens to me, I need you to make sure you let the world know that we already know there is an Antidote, and I said OK I'll let them know, he goes

the Antidote is Zinc and I said awesome Zinc, i promise you, I'll make sure the world knows it,

that the sinks and antidote also for that and then I said this to him a month before die, Zev, do you know what the Marburg viruses is? then he goes no, and I said the Marburg virus I've already looked into this, which is ironic is named after a city in Germany, but it's going to come out of China, the Marburg virus is actually the identical symptoms to every single venom found in the boomslang snake in China,

and they synthetically have been manufacturing in biological weapons labs in pharmaceutical research labs synthetic versions of boomslang snake venom for decades, and multiple factories all over China and they're inserting them into plasmids and they're going to do the same thing they're going to release it again.

boomslang snake venom is what causes the haemorrhagic effect external bleeding out of your eyes nose mouth skin out of your anus, you're just going to bleed out all over the place, they're going to say you're going to fall over, dead people all over the place is bleeding out of the bodies, that is the impact of boomslang snake venom, I told of that I said so just go print out,

so I print out Marburg virus and all the symptoms and then print out a snakes venom you've never heard it before, the boomslang snake venom and just lay side by side, and you'll see that that is identical now it's odd for all of you at home, this occurred this conversation with Doctors Vladimir Zelenko, he died the very next month the very next month in August of 2022 last year.

Hollywood actually put out a movie called Bullet Train, so in this movie there actually you're here in reference to a boomslang snake over and over and over but it has no part of the plot of this movie, now everyone is the dumbest movie ever, no story to it,

I started it to, and I shut it off a few minutes, I couldn't take it.

so dumb, but what the first scene grabs my attention wasn't everyone else in my family fell asleep within 5 minutes, because it's a boring movie, dumb movie, but I could recognize the symptomatology they were showing mimics what next Pandemic is.

since Doctors Vladimir Zelenko called me something about to come out, so I want to see what's going to be continuing this movie, boomslang snake is showing up in the movie over and over just slithering through the train, and people running off or she's hissing at the audience, but it doesn't do anything, doesn't bite anybody, nobody gets injured by it, so I'm just kind of watching this and of course the boomslang snake mentioning of that snake specifically in this movie was going to grab my attention.

then you're introduced to two Co-stars in the movie on the train, who are going to be supporting Brad Pitt, with whatever the purpose of the movie is, whatever the story is, it's a black and white and they introduce each other by name, but then go by code names and their code names are lemon and tangerine, and I was like Oh my God,

why? I get there. lemon and tangerine

they even told you the antidote, inside of lemon and tangerine is the antidote to the Marburg virus, anti Covid, did you know vitamin C is inhibitory to all snake venoms, only because of you, you know that's why when Chinese researchers in Wu Han decided to treat every patient with high dose vitamin C in the hospitals in January of 2020, 100% of every Chinese patient went home by day five with this new novel coronavirus pneumonia, they gave them 25,000 to 65000 intravenous milligrams of vitamin C and 100% of all the people went home, totally well, what it's amazing about that,

they all went home and then the Chinese government which makes the most ascorbic acid which is vitamin C in the whole world for the supplement industry, gave vitamin C to all of its citizens to prevent them from getting Covid the whole time during the pandemic, did America do that? did American hospitals let their doctors give vitamin C when we were all asking them to do that for our loved ones in the hospital? No, it was being bribed Remdesivir, were not giving you vitamin C.

and we're keeping liquor stores open, keep liquor stores open

so lemon and tangerine these two guys introduced themselves on the train, and I'm like Oh my God, they're going to tell you the Antidote.

its fast forwards to the end, not a joke, the villain shows up on the train opens a trench coat, this female pulls out a vaccine and injects Brad Pitt with it, right in the heart, and injects whatever is inside, but she tells him what it in, we inject you with boomslang snake venom, and stuck right into his chest,

I watch this. Oh my God, they're even telling you what they're putting it in the shots, Brad Pitt looks down it goes good thing I took anti venom this morning monoclonal antibodies, pulls it out and injects it inside of her, in the ladies, the eyes start bleeding, nose started bleeding, mouth starts bleeding, she kills over, she die.

Wow, alright, they're just setting the stage for what's happening.

so, you know with the coronavirus pandemic that they called the COVID-19 pandemic, the entire narrative of COVID- 19 was also told by Hollywood in 2016 and then it aired February 2017 on NBC, and 150 minute show,

what are you talking about.

so there's a show called Blacklist, still on Netflix, go watch it right now, if you want to think I was joking about the venoms being what they created COVID-19 with, watch season four episode 15 of the Blacklist that aired on NBC, and is currently on Netflix. season four-episode 15 Blacklist on Netflix.

Blacklist on Netflix, the entire narrative of COVID, it starts with the main actor name Robert Redington, he takes a drink of Scotch, takes a drink, seem blacks, he wakes up in an ICU he can't breathe, doctors can't figure out what he's been poisoned with, their trying to restrain him, he is a massive criminal this guy is, and the way is, he's got this ICU, makeshift ICU somewhere, in case someone ever tries to poison him, would kill him, he's got some place to go, get in to a hospital,

so he is wake up and can't breathe, oxygen levels are way down, he has been there several days, but doesn't know how long, doctor says you've been poisoned with something, we haven't figured out what it is yet,

what happened to me, what happen to me.

we don't know yet, we've only been able to stabilize you with corticosteroids, this what he says. Robert Redington asked how much time do I have to live?

we don't know, we don't know what you're poisoned with, we're trying to figure that out, it could be days, it could be minutes, it could be weeks, I don't know.

Robert Redington: I don't have time for this, he got up, he rips out all his ivs and he leaves, because he was so weak and stumbling around and can't breathe, he kidnaps this African American girl and ask her to break into a pharmacy for him, because he can't do it, he can't breathe.

OK, she goes what are we looking for in the pharmacy, they break open the door go inside, and he says I need Corticosteroids in a Bronchodilator.

and I'm like watching this, and I'm like Oh my God, this looks like COVID, this is before I came out the week before I came out with my Watch The Water documentary.

I was watching, I was like wait a minute, Bronchodilator was already confirmed by Doctor Richard Bartlett, Budesonide was a cure for COVID, and this dude says I need a Bronchodilator, Corticosteroid.

Dr. Pierre Corey, ICU doc out at Wisconsin is screaming to the world that they're minimizing how much corticosteroids they will allow us to give COVID patients and will save their life.

but they wouldn't go above 6 MG that was the hospital protocol. so, I'm watching this, I'm like Oh my God. Corticosteroids. and she finds a Corticosteroid pours it into Robert Redington's hands and in the camera, in assist his face,

he goes: i try to avoid this my whole life, or something along these lines. I've been trying to avoid this my whole life. corona of death. and then he passes out, falls in unconscious on the floor in the pharmacy. the FBI works with Robert Redington, the FBI is trying to figure out what he was poisoned with, and they discovered in the 40th minute or so of the show, the FBI has discovered what Robert Redington was poisoned with, in his drink to create his respiratory failure that required Corticosteroids, and Bronchodilator save his life.

is it snake venom.

And it not just snake venom.

they say it's a venom peptide found in a very rare snake called the redheaded crate snake,

Oh, wow

and they show the crate snake on the screen, now this is not a joke. I was like, Oh my God, they just told the whole thing, when was this aired, when this come out, I going to look it was in February 2017 is when they published. he drinks the venom, the person who poisoned him, who got the venom to put in his drink that he drinks, which is what I was researching, this show was one of the things that I think God wanted me to see, to say go tell the world, you were right.

there's only two days later when I called Stew Peters and Mike Adams, said I've got to tell the world, we have to do this, so in that they determine it's crate snake venom he's been poisoned with, but the guy poisoning Robert Redington, also poisoning his wife, in the story the wife wants to leave him, but this guy wants her to give him a child and she's never done it,

So what he does as he takes the venom of the snakes and he puts it in an eyedropper, and he puts it into one dropping her eye every day, and it paralyzes her, she cannot walk, she's laying in bed, he's obviously raped her to get her pregnant, and he's just keeping her in this snake venom neurotoxic paralysis state in bed, but alive during the pregnancy.

just say, I told everybody they're getting venom through the water into you, and it's going in through your eyes, and your drinking, and you're getting it through your eyes, in your skin, in your showers, its conjunctivitis red eyes was a massively reported side effect of early COVID the first year of the pandemic,

and I'm watching this show, and I'm like Oh my God, they did it, they told you the whole thing. anyway, this is them telling you what they're doing, they will tell you, they have to show you, I don't know why they do it, they have their reasons for doing. but this is what they're going to do tomorrow.

they call it predictive programming, they do it many many times, White Noise, I think was a movie or show or whatever was on Netflix, that showed exactly what happened in Ohio with that train and all the, you know the toxic material

that poured out from their exact place, exact way, that's what happened over there right before 9/11,

6 months before 9/11 happened. I forgot the name of the show, I'll get the name for you, maybe we can even show it over here. but there's a name and there was a show that actually shows in one of the episodes, planes going and hitting the towers, that was remote control, that wasn't the people in the cockpit, and then afterwards it's it basically dives into these whole things like Deep State of individuals doing things behind the scenes.

so, it's been going on for a long time, and some say that predictive programming is a way for individuals that understand how certain things work, to tell you, and put it out open to deal with like the karmic consequences of not having to deal with it, because they at least let you know, in a way, that's in your face.

so that's interesting.

they do this, so I want you to know that in the show, the FBI had looks at the other agent goes where would this venom come from, if it's such a rare snake and they said there's only two places in the world that harvest is this crate snake venom that could have been put in his drink, and this is where is ones in China and ones in Scranton Pennsylvania, now this is important. because I had already figured this out, operation warp speed this push to get the Covid-19 vaccine mRNA technology in nine months forced on the whole American population, all over the world.

do you know where the two scientists who created mRNA Covid-19 vaccines, do you know where they work currently at the University of Pennsylvania, their names are Catelyn Caraco, Andrew Wiseman, these two individuals are credited with creating the mRNA Covid-19 technology in the shots, and this is important, the venom then went to Robert Redington came from a serpentarium they said in Pennsylvania, a serpentarium is a PlayStation Store snakes, they sell snakes, harvest snake venom, eggs, you need it.

was in this Pennsylvania place, alright this is important, cattling carico? Andrew Wiseman created mRNA technology they created what's called mRNA gene therapy, since 2009 they have been paid by the NIH to create mRNA gene

therapy, the specific department at the NIH that pays them to do that is Anthony Fauci department the National Institutes of allergies infectious diseases, and in their papers since 2009, 2011, 2012, 2015, 2017 and on to create Covid-19 vaccines in every single study.

since 2009 they state, we have to use snake venom phosphodiesterase to cleave the RNA in the mammal to do our RNA gene therapy, it's in their papers, we use snake venom phosphodiesterase a component in snake venom that will damage and cut your RNA, and then they quote, we use RNA is a RNA SLRN AST also to cut your RNA and all are in aces are enzymes in snake venom that cut your RNA to kill the prey, so when they said in this thing, this venoms coming out of Pennsylvania in China and the TV show,

I already knew the University of Pennsylvania was the school being credited by the two scientists underneath there to Liege who had been creating the mRNA technology in are, now receiving lifetime achievement awards for their snake venom laced vaccines called COVID-19 mRNA shots,

that they're inserting plasmids with spike protein genes that were confirmed by geneticists to be snake venom, now this is important, we talked about the Antidotes of nicotine, I decided before I did my interviews that if their snake venom phosphodiesterase inside of these Covid 19 shots like they say they put in there in their research studies, what destroys snake venom phosphodiesterase, and then my next thought was, surely these two people aren't in Pennsylvania like milking the snakes, right to put in their shots, there's going be people manufacturing this stuff, so who are they buying it from,

so I went online to find out can I buy snake venom phosphodiesterase for research, and there's a company called innovative research now bought by Thermo Fisher Scientific innovative research, and Thermo Fisher Scientific have the same label product a little bottle of snake venom phosphodiesterase for 150 bucks, and it says to the buyer this is derived from rattlesnake venom and it's only for research purposes weather injecting inside of you, and it says researchers you cannot mix snake venom phosphodiesterase with any of these four substances because it destroys the snake venom phosphodiesterase from being able to do it's toxic payload stuff.

so these four things are basically antidotes

that says you can't mix it with glutathione, which your liver makes, you can't mix it with any in acetyl cysteine, you can't mix it with vitamin C, and it's completely destroyed by something called EDTA

EDTA, OK so they tell you the antidotes, and then they did something really awful actually, they actually disclosed the very last statement and there is snake venom phosphodiesterase has an absolute requirement for magnesium to be activated,

what does that mean? that means the venom can't do its damage without magnesium being bound to it,

I wonder you implying here,

but if you've had these shots and you have any symptoms of injury, and they're prolonging you need to stop supplementing magnesium for three months, and I mean all magnesium and we're seeing more reckless results of people who are struggling with cardiac issues from myocarditis tachycardia, a rhythm is that if they're on magnesium, if you just simply take them off of it, all the symptoms go away, along with their nicotine along with the EDTA,

these vitamin C recommendations or in acetyl cysteine, this is important in the shots, they state that they use snake venom phosphodiesterase but the people who manufacture that in sell it to the researchers say, you can't mix it with in acetyl cysteine, it'll destroy the venom 's toxicity, do you know that in may of 2020 the FDA put out a statement that they were going to make it illegal for supplement companies to sell in acetyl cysteine,

that has been sold by something that companies for over 75 years here in America, this is may of 2020 the shots didn't come out until December of 2020, but like 5-6 months before the FDA is coming out saying to those companies, you can't sell it anymore, and all these companies around America had a hissy fit, all file papers against the FDA to get them to stand down, and they did.

but it made us all wonder why they would actually go after acetyl cysteine; do you know that in acetyl cysteine is a published natural substance that breaks down and blocks the blood clotting effects of all snake venoms.

Wow! and what did we see with Covid in blood clotting, what you see with long hauler Covid in blood clotting, would you see with after the vaccines blood clotting, this is just how nefarious it all went right, in May of 2020 the FDA says nobody can sell acetyl cysteine, stampers by prescription only, still hasn't happened, but that was the threat same month they come out and lie to you saying smokers are the most affected by Covid and end up hospitalized and dying.

so everybody stop smoking, this is how disgusting this lie went. OK we got go May 2020, is when all this stuff is current, acetyl cysteine is getting banned, for go smoking, do you know what happened in June of 2020, the very next month, do you know that researchers in Italy after hearing China say that the origin of Covid was two snakes, and the French researchers said the spike protein gene was from the same snakes,

did you know that there was a scientist named Carlo Brogna, CARLOBROGNA in Italy who published a paper after starting a study early on independent, he went around Italy and decided to PCR test everybody that was sick for Covid, it supposedly tested positive, and then he went around all these cities in Italy, and collected people who did not test positive for Covid with the PCR test, and he said great, we're going to take you guys that do not have Covid, and are not sick, and we're bring you guys here who tests positive with the PCR test and are sick, and we want three tissue samples from all of you, I want blood, urine, and feces from all of you, and we're going to run three tests on your blood, feces and urine, and they published that only the results were found only in the COVID-19 positive patients,

not in any of the negative group there was over 36 different confirmed by three different tests, 36 different animal venoms in the Covid-19 patients blood, and in their feces, and none in the negative group, and this included not just the crate snakes venom called bungarotoxin and not just cobra toxin from the king cobra, there's over 20 different snakes venom proteins found in every COVID-19 patient, and then there were 16 different animals in the ocean floor, or on the ocean floor there was a starfish venom in these people, from the ocean floor called the crown of thorns starfish in 15 different cone snail venoms, cone snail only live in the ocean, there deadly venom was inside 15

different items were in the blood, and in the feces of only Covid-19 patients, and those venoms are called conotoxins.

Jason, that list of the 36 different victims the Carlo Braga could firm by three different tests it had mass spectrometry, then it had liquid chromatography, then he sent the samples to Germany for an additional test he didn't do, maybe it's one of the three, but he had to also send it off to Germany to do, a different test that he can do, but these three test included one called ion fractioning, and use gases to do this, and the reason why they wanted to do this third step, is because if they found animal venom in this person it would be so specific using this ion fraction technique, it will tell you exactly what animal the venom protein came from.

Wow! and This is why they could confirm that it came from the Malayan crate snake, the Chinese king cobra, what they found eastern brown snake venom from India, they found coral snake venom from a snake in Uruguay in every one of the patients, they found pit Vipers, they found Bothrops jararaca from Brazil venom, they found saw scaled Viper venom, and then 15 different cone snails from many different regions of the world, and starfishes venom called crown of thorn starfish,

if you look at the list of the 36 venom proteins there all listed in this study called toxin like peptides found in Covid-19 patients blood, urine and feces, if you look at that study it was published online peer reviewed and approved in October of 2021, this paper if you go through the proteins listed from the venoms of all 36 of those creatures, every one of those individual proteins explains every single symptom of Covid, that anybody had, it explains why some people had blood clots, it explains why some people had loss of taste and smell, it explains why some people have cognitive function impairment,

it explains why some people have IBS, it explains why some people have diarrhea nonstop, like summer vomiting, every single protein tells you that, there was this thing called angioedema, did you ever see anybody, I didn't see this, but there are people around the world red their eyeballs would swell, their eyelids would swell up real big or their lips would swell up real big, that called angioedema,

if you look up angioedema ANGIOEDEMA, if you look it up look up angioedema COVID-19 and then in images, and you'll see all these horrific pictures of people around the world in hospital with parts of their face is swollen, inside the Covid-19 study, where they found 36 different venoms there's a substance in venoms of snakes called bradykinin and bradykinin and that venom protein is what causes singularly angioedema, and you know they published this bradykinin venom that causes angioedema in anybody was also found in every Covid-19 patient, do you know the bradykinin are blocked by something in nature called bromelain found in the stalks of pineapples, it's pretty phenomenal,

because this is actually an ingredient in a product Doctor Peter McCall is about to come out with, he doesn't even know that bromelain has this inactive ability to protect you from venom creating this outcome they call angioedema,

but you go through that list of proteins, I can explain to you, it doesn't matter who your loved one is it, doesn't matter what they died from, I'm not joking, it doesn't matter what they died from, what their suffering with it, doesn't matter, it is all perfectly defined by synthetic manufactured venoms around the world that they're infusing in plasmids and they're calling it Covid,

and I need to speak this very quick in 1956, a Doctor Stanley Cohen discovered that when you expose neurological tissue and any epidermal tissue in the human body epidermis means skin, but derma stepping top of dermis skin any skin in the body which also covers every organ in your body, 1956 he took snake venom and he just squirted it next to brain cells and every cell in the body of a mammal, he discovered in 1956 with brains cells of a developing chicken embryo, than if you just squirted snake venom next to it in a Petri dish it could grow a brain tumor within hours of exposing the brain tissue to venom,

couple years later, he starts experimenting with tissues of kidneys, liver, stomach, breast tissue, let's put those in cells and see what happens when you actually lay snake venom next to it, they grow cancer cells all over, and he called these two side effects of snake venom and a mammal and a bird nerve growth factor, brain tumors in the brain, and epidermal growth factor creating massive tumors in gross, and any other tissue in the body, epidermis is everywhere, epidermal growth factor, nerve growth factor.

Jason, he discovered snake venom does this to mammal tissue and bird tissue in 1956, do you know that he won a Nobel Prize for figuring that out in 1986, so Jason inside of the Carlo Braga study where he found 36 different venoms these include cobra toxin, bungarotoxin and conotoxins, during the pandemic while we're being lockdown, they are taking animals in labs around the world and injecting them with alpha conotoxin and then other ones with alpha cobra toxin, and they published that within 72 hours,

those venoms specifically cross the blood brain barrier target glioma C6 cells in the brain stem of these mammals, and develop a brain tumor called a glioblastoma, and they show it how fast they can grow it in 72 hours, these animals had no brain tumor until they injected them with alpha conotoxin, alpha cobra toxin, and they can grow a brain tumor in less than 72 hours.

Jason, the very next thing they do after 72 hours of creating a brain tumor which they say the venom binds to nicotine receptors, Alpha 7 nicotinic Peppers and then the body starts producing massive amounts of the same nerve cells as a reaction to the venom, over the next 72 hours,

they only treat the animals with one thing and they want to see what happens, they inject them with two different doses of nicotine and they proved and showed under electron microscope, they could completely obliterate the actual glioblastoma brain tumor in 72 hours with just nicotine,

and it works that fast, and it works that fast, in fact it worked so fast that in 72 hours 50% of the entire tumor was gone after just administering nicotine that they cancelled the study, why would you cancel the study, why you just see from the next 72 hours you get 100% if gone,

what's the danger during the pandemic while we're being locked down, knowing the Covid-19 vaccines are going around in these DNA plasmids with spike protein genes are going around, they're calling a respiratory virus called Covid with all these venoms in them,

they're publishing that those venoms they found those 36 venoms, they're injecting those into animals all around the world to see what they do in mammals, and I can 100% show you they can create 4 irreversible human diseases with these venoms in 72 hours or less, and I will name them, they can

create a glioblastoma brain tumor 72 hours or less, they can create a type one diabetic in less than 24 hours with those venoms, they can inject king cobra venom, cone style venom, bungarotoxin, Anti-Venom and turn it into a type one diabetic in less than 24 hours, that supposedly irreversible and genetic can't cure that one.

OK so they create type 1 diabetics, they also create Parkinson's animals in 72 hours or less with these venoms, and then they're creating myocarditis animals in less than 72 hours, and then every single one of these irreversible human diseases that are in these mammals that they created with the same venoms, they're putting in Covid patients and finding in a Covid patients and in the Covid vaccines, every single one of those

Jason, the only treatment they used was experimenting with three different measurements of nicotine, in every single case they reversed type one diabetes in less than 24 hours with nicotine, they reversed the glioblastoma brain tumor in less than 72 hours with nicotine, they reversed Parkinson's with nicotine.

do you know they've actually published studies of Parkinson's, if you have twins, and one twin is a smoker and the other is not, that there's a higher propensity for the non-smoker to become Parkinson's than the smokers, really?

genetically identical, nicotine prevents also Parkinson's, you know that, they're lying about that too, alright so when my "Watch The Water" documentary dropped.

when I said the antidote of Covid is nicotine, did you see two months later from when I drop "Watch The Water", took within two months, did you see that England, the United states, Canada, New Zealand, and Australia all introduced brand new National Health agenda campaigns, did you see this,

No, they all announced in unison in the same week that there is brand new National Health agendas for their countries and they were all identical, we will have a tobacco free country, we will have a tobacco free country by the year 2030, New Zealand took it even further and said Oh no not us, we're going have it tobacco free country by the year 2025, really? did you see what Joe Biden said last month, we are going to be the first administration in U.S. history to reduce and put a cap on how much nicotine is allowed in tobacco products moving forward.

Interesting. nothing else just nicotine, you better be careful, they know the Antidote is nicotine, thank God, Doctor Edgar that you know, we have already been sourcing organic eggplants from around the world, and we're going to figure out Antidotes using nicotine from the eggplants that far legal until America decides to make them illegal,

That will come to, going to find natural resources that way

now just for more clarity for anybody watching that wants to try this at home with nicotine patches, is there a specific company that you would recommend, certain dosages you know, we don't want anybody doing something that can hurt themselves,

sure, this is a great question, actually I want the audience to hear, so I've actually done research to see, and not me just alone, a group of us to see what are the cleanest least toxic adhesive patches that might be manufactured around the world, and we do have one brand called RUGBY to recommend, RUGBY

the only place I can actually find it is on Amazon, so that's the brand we like the most, but I do not think that people just need to use that brand, we're trying to give you hope and freedom from your suffering, so even if it's just for six days using any brand always start with the lowest dose, please don't forget it they only come in three sizes 7, 14 and 21 milligrams, when you're using nicotine the principle behind nicotine it releases venom off your cells,

now there's venom floating around in your body, so you're releasing the venoms, if you're using too much nicotine, you'll release whole lot of venom in once. some people may got nauseous, vomiting, diarrhea, if that happens to you at the first day of using the 7 milligram patch, just cut in half, wear a smaller one, the next day, this is what I would recommend,

I personally for prevention by a 14 milligram size and cut it into six equal pieces and wear one of those little patches every day, and I have for a year now, just to prevent any circulating venoms that I might come across.

The most reward comes out of this interview it is getting to you at home, not to believe everything, you question everything you hear in mainstream, social

media, from the federal health agencies, and ask yourself do they really have your best interest at heart.

Number two is this, I even think it's greater than this one, please please remind yourself, either you believe that God created you, and that God is all-knowing and all-powerful, and got it right the first time when he made you, or you're an evolutionist and you believe that evolution provided the opportunity where you are the greatest Organism to ever survive on this planet, and in either case,

if you were going to tell yourself that you are going to put less faith in this God created body, or evolutionarily superior body called the human body, in either regard, if you have either one of those belief systems, shame on you for trusting science in man to create something they're going to tell you that God or evolution made inferior,

God got it right the first time and when God put you on this planet, in my perspective, he actually said to you, I put everything on the earth that was for the benefit of man.

well you want know what wasn't here, when he puts you down here, pharmaceutical drug companies wasn't here, man put those here, man convincing you that they have figured out how to make God's creation better than he did, and they have been lying to you nonstop from the time you have had your breath taken away, when your new grandbaby or your own baby came into this world, and you witnessed the miracle of God's creation or nature, the man or woman standing next to you in a white coat looked at you, and said I need to take that creation and we need to make it better and inject it with our drug called a vaccine,

because God forgotten immune system, Mother Nature forgot to provide a way for this thing to survive, no he didn't, man and science had to convince you that God failed in that nature failed you, when in reality the answers were always found in nature, God did not screw up when he created you, God did not screw up when he created the tobacco plant, eggplants, tomatoes, vegetables,

he put all the nutrients on the earth and in the soil that you needed to survive.

if anything could be taken away from this, I did not want to know anything about Remdesivir, I didn't want to know anything about snake venom in relationship to COVID, I didn't want to know anything about nicotine being addictive or not, I didn't care, but circumstances woke me up to that there was a fraud or a lie, and I needed to go find out for myself how far to that lie, deception go, so I can make sense of the madness being created around me, that they called a pandemic.

did you know world that the Pharmaceutical industry and the medical community they loved one particular language to keep us confused, and you at home confused, and seeing them as some superior or Raider or human being, they love a language called Latin, did you know that Latin in every medical terminology, did you know that every diagnosis is in some form of Latin,

do you know that the Latin definition of the word virus is actually venom, and you know that was published in the Wall Street Journal in February of 2020, but the reason why the word virus is so important to put into the naming of this pandemic, is because the word virus historically means venom, all venoms target nicotine receptors, all nicotine receptors control the entire function of your human frame. there are other nutrients the body needs obviously.

this has been a great fraud in a great lie. please put your faith in what God created in your own ability, to read, study and then use your own intuition and trust in God and pray.

thank you.

And I want to remind everybody that's watching today, number one, if you're watching this right now, it's not by coincidence, there's a divine order, an intelligent order and absolutely everything, you're here not to be quiet, because you're afraid of what your coworker, or colleague, or boss, or mother, or father anybody may say about what you bring to the table,

you're here to speak the truth, and to spread that no matter the consequence, that's what people like Doctor Bryan Ardis were doing, his life has been in danger multiple times, and he still does this work, and he has no other motive to do this work other than helping us be our best self, other than helping us

live healthy life, because that's our birthright, it's not normal to have cancer proliferate all around the world, it's not normal for the world to be as sick as it is today, and it's not just the way it is, that's just the way that we made it, and just like we made the world sick, we can also make the world healthy, if we choose to use our free will, and exercise our free will in a positive way, we can only do that through awareness,

so I hope you guys enjoyed this interview today, it's all about the Antidote, it's about understanding the problem, and then focusing on a solution, we brought a lot of solutions to the table today, and I'm not just sitting here because it was my idea, I'm sitting here because TLS asked me to do this for one very very simple reason, because this is an answer that can help a lot of people wake up, so I ask you to share this interview far and wide, download it,

put it on every single possible platform that you can, and let's do what we come here to do, wake up the world and make it a healthy and bright world once again. so thank you very much, Bryan, I appreciate you and I look forward to doing more work together in the future, God bless you, and God bless you all at home.
